Captive in a prone area?

Landowner responsibility for preventing disaster risk in the built environment in Norway

by

Lene Sandberg

PhD Candidate

Faculty of Law

Arctic University of Norway Tromsø

Moderated by Dr. Jeff Birchall, School of Urban and Regional Planning, University of Alberta; Lead, UArctic Thematic Network on Local-scale Planning, Climate Change and Resilience

In the light of climate change more frequent and intense landslides and floods will result in damage to property and belongings.

While risk increases, and prone areas expand, it is still unclear who is responsible for implementing preventive measures for the built environment. Lene will discuss this dynamic in the context of landowners who after a new risk assessment, find themselves in natural disaster prone area.
